

POWER DISTRIBUTION ROOM

Powerline's mains room is a large, 3 phase distribution unit built into a 20ft ISO shipping container.

It has the facility to accept up to 4800A of three phase power (across three 1600A incoming supplies) and can distribute this into twelve separate 400A, three phase outgoing supplies, each with individual protection. It has a selection of single and three phase outlets, and full, real-time monitoring of the three incoming supplies is provided by state-of-the-art digital power meters.
